

# STAY SAFE FROM CYBER ATTACKS

**Shopping sites** are among the top malware infected sites

**1+ MILLION**

people are victims of cybercrime every day, that's

**12 People Per Second.**

**59%** of malware is mobile and almost **1/3** is aimed at stealing info

**61%** of malicious sites are regular websites that have been compromised

**Social Media** ransomware and phishing schemes using social media is a growing threat

## KNOWLEDGE IS PROTECTION!

### 5 Best Practices to Stay Safe Online:

- 1 Look for an HTTPS and/or padlock** in your browser address bar before submitting personal information on a website.

- 2 When the browser address bar is lit up green**, the identity of that website has been strictly validated.

- 3 Look for a trust mark**, such as the (the Check Mark) Norton Secured Seal. It proves that the website is legitimate, and not a spoofed website.

**SUBJ: WINNER!!!**

**4 If an offer in an online ad or an email sounds too good to be true, it probably is.** You may be tempted to click, but you'd be wise to junk them instead.

- 5 "Cooldude" is not an acceptable password.** Pay attention to the passwords for your email, social networking, and online banking accounts.

**Keep them as unique as you can:**

- At least 8 characters
- Random mixture of characters upper and lower case, numbers, punctuation and symbols
- No words found in dictionary
- Never use the same password twice
- Change your password every 6 months
